DETAILED ACTION

Claim Objections

1. Claims 5-19 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, these claims have not been further treated on the merits.

Claim Rejections - 35 USC § 112

1. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "any means for accommodating one or more other functions, such as mirror heating...etc." However, exactly what is intended to be covered by this phrase is unclear, and thus the metes and bounds of the claims are unascertainable. Note that this renders indefinite the relative arrangement of the elements associated with this "means."

Further, in line 11 "said means" is ambiguous and indefinite because multiple means have been previously recited.

Art Unit: 2872

Inasmuch as the claims are able to be understood in light of the 112 rejections made above, the following rejection(s) apply:

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kaspar (6170957).

Kaspar shows in fig. 3 a vehicle mirror including means(3) for adjusting the mirror plate relative to the housing, mirror heating means(12,etc.), a plastic build-up element(4), metal reinforcing conductive elements(5), and an electronics unit(8) for controlling the various functions.

Kaspar does not specifically teach means for adjusting the mirror housing relative to the support. However, such means are very common in vehicle mirrors. It would have been obvious to include such means with Kaspar's mirror device in order to allow

for pivoting of the mirror housing relative to the vehicle, i.e. folding of the mirror.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fujie et al, Henion, Polzer, and Fuchs et al all show various arrangements for vehicle mirrors.
